DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Basile.
3. The patent to Basile discloses all the claimed subject matter of a steam-cleaning appliance comprising: a housing 11, including a water storage chamber 22 and a pump 19 mounted therein, the water storage chamber receiving cold water, and the pump being connected to the water storage chamber via a pipe 27 to pump cold water; and a steam device 18, mounted within the housing, the steam device including a water-flowing path and a heating unit 20 that is placed vis-à-vis the water-flowing path, wherein the water-flowing path further includes a water inlet that is connected to the pump via a pipe 28, and a water outlet through which cold water after being heated is sputtered into steam to a steam pipe 29 connected to the water outlet, the steam pipe delivering steam to a nozzle 30, thereby a steam path is achieved to reduce the steam formation time while the pump allows the user to control the steam amount and the steam flow for ensuring a safe use. The steam-cleaning appliance further includes a removable cover 23 which is further mounted on the water storage chamber to allow the user to refill water therein and wherein a principal switch (see column 4, lines 55-57) is further mounted onto the housing to control a switch of an electrical connection to a power supply.

Allowable Subject Matter

4. Claims 2-5 and 8-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Gilbert, Karubian et al., Thomas, Hsieh and Japanese patent to Shin show the current state of the art in steam cleaning appliances.
